

# TruSecure® Risk Commander™

Gain control over information security risk

PRODUCT SHEET

Anticipating risk and gauging the likelihood of negative consequences and lost opportunities are the responsibilities of an enterprise's senior managers. Managing and making business sense out of a broad array of data from across your enterprise is a daunting task. To overcome these challenges, you need solutions to help you:

- Manage overwhelming amounts of data from disparate security sources;
- Consolidate, identify, and illustrate critical risk data;
- Measure, track, prove, and report compliance with applicable policies, standards and regulations;
- Demonstrate effective risk management at all levels;
- Prioritize and manage remediation efforts for addressing escalating vulnerabilities; and
- Maintain an adequate security posture despite decreasing IT resources.

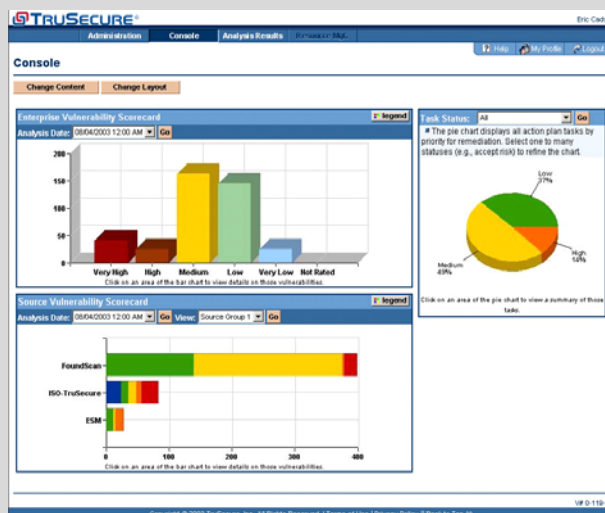

## A Window Into Your Environment

TruSecure's Risk Commander is an enterprise software application that provides a centralized risk management "dashboard," automatically collecting and aggregating data from disparate sources across the enterprise, including vulnerability scanning tools and other devices, and gives you a single consolidated view from which to manage your information security posture. Unlike other security products, Risk Commander transforms data into actionable intelligence that demonstrates enterprise risk reduction, which you can measure against your relevant policies, standards and regulations. Risk Commander correlates and administers data from any number of third-party sources and links the information to business functions, supporting technologies and processes.

## Benefits

- Enables you to easily and more accurately understand the potential impact of the identified risks and the relationships between affected devices;
- Allows you to document and prove progress toward meeting policy, standards and regulatory requirements;

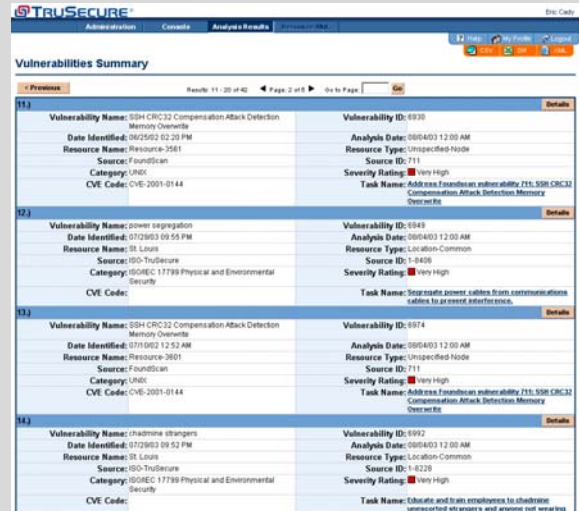

- Helps you understand and communicate the improvements you achieve in reducing your exposure to risk and gain more control over your security environment;
- Enables you to prioritize remediation activities and track those efforts from discovery to resolution;

*The Risk Commander "dashboard" view consolidates data from across the enterprise and turns it into actionable information.*

## Features

- Automated vulnerability analysis and reconciliation engine identifies the impact of vulnerabilities in a business context;
- Preserves your investments in third-party solutions and facilitating more effective allocation of costly security resources;
- Policy compliance tracking feature helps you define and collect relevant security data in the context of applicable policies and standards;
- Open, flexible architecture and automated processing easily accepts data feeds from leading security event and management tools;
- Scorecard views and quantitative trending analysis track vulnerability remediation activities; and
- Open interface accepts data from disparate third-party tools and integrates it into a centralized management dashboard for a consolidated view of the information.

The screenshot displays the 'Vulnerabilities Summary' page in the TruSecure interface. It features a table with columns for Vulnerability Name, Date Identified, Resource Name, Source, Category, CVE Code, Vulnerability ID, Analysis Date, Resource Type, Source ID, Severity Rating, and Task Name. The table lists several vulnerabilities, including 'SSH CRC32 Compensate Attack Detection' (Vulnerability ID: 6930), 'power segregation' (Vulnerability ID: 5943), 'SSH CRC32 Compensate Attack Detection' (Vulnerability ID: 6974), and 'chadma strangers' (Vulnerability ID: 6992). Each entry includes detailed information such as the date identified, resource name, source, category, CVE code, analysis date, resource type, source ID, severity rating, and task name.

*Risk Commander is powered by the TruIntelligence™ Security Knowledge Network, which provides severity information that enables users to prioritize mitigation efforts and manage costs.*

## About TruSecure Corporation

TruSecure is the leading provider of intelligent risk management products and services. TruSecure dramatically improves security and reduces risk by helping organizations make better security decisions and maximize the effectiveness of existing security people, processes, and products.

Leveraging TruSecure's vast security knowledge and intelligence gathering resources—including ICSA Labs®, the global leader in information security product certification—as well as innovative technology and time-tested processes, our customers can *predict* which vulnerabilities present real risk, *prioritize* remediation efforts, quickly *adapt* to changes in the security threatscape, *measure* progress in improving their security posture, and *document* compliance with applicable security policies, standards and regulations.

TruSecure Corporation has offices in North and Central America, Europe, and the Asia-Pacific region. Our customer-proven solutions are used by more than 700 organizations worldwide.
